Part of Paper No.

☐ Other\_

**Office Action Summary** 

Application/Control Number: 09/453,729

Art Unit: 1714

It is suggested that Applicants should review the application for any errors.

The disclosure is objected to because of the following informalities: On page 32 and other pages of the instance application a space should be inserted between the numeric "value" and "g/cm3" and any other numeric expression; and 1/4" should be corrected to read --
1/4"---.

Appropriate correction is required.

Claims 1-11 are objected to because of the following informalities: Claim 1, line 3 should be corrected to read 0.8 g/cm3; and in claim 6, line 2 a space should be inserted between "500" and "psi". In each of claims 1-11 the "," should be substituted with a "." for clarity. Appropriate correction is required.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 8-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 8 is indefinite for line 1 "controlled" which may be overcome with the insertion of -- cooling --- after "controlled". Claims 9-11 are indefinite and confusing for "The laminated sheet
product of claim 8" which have no basis nor support from claim 8. Claims 9-11 directed to

Application/Control Number: 09/453,729

Art Unit: 1714

laminated metal, resins, etc product or article claims and improperly depend fror method claim 8 for producing a porous coal - based product from coal.

Claims 9, 10 and 11 recite the limitation "The laminated sheet product of claim 8 said material, said sheet core, and said sheet core respectively" in line 1. There is insufficient antecedent basis for the said limitation in each of the claim.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Harnett 3,309,437.

Harnett teaches a porus based product having compressive strength typically in excess of 5,000% psi (note column 4, lines 1-9) when heated to 950°C and an apparent density of 0.93 g/cc (note Table 1 for Examples 4 and 5) and further graphitizing (note column 5, lines 20-44) which anticipates Applicant's claims 1-4. Patentee's apparent density of 0.93g/cc anticipates

Applicant's apparent density of between about 0.1 and about 0.8 g/cm³ because about 0.8 g/cm³ reads on 0.93 g/cc.

Claims 5-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Harnett 3,309,437 in view of Koppelman 4,127,391.

Application/Control Number: 09/453,729

Art Unit: 1714

Harnett teaches a process for producing porous coal - based product produced from coal comprising heaingt coal particles in a mold, carbonizing at a temperature over 600° C at heat rate of 10° C, cooling said carbonized body and further graphitizing said carbonized body, note in the entirety, especially Examples 1-2 and 3-12 of Table 1, column 1, line 51 to column 2, lines 1-35, column 3, lines 1-22 and 49 to column 4, lines 1-65 and column 6.

Applicants claimed process differs from that of the prior art in that the instant process comprises a soaking step and a controlled cooling step. It is Examiner's position that the inclusion of a soaking step and controlled cooling step would be obvious in view of Koppelman. Koppelman teaches a soaking and control cooling step after a carbonizing step for treating coal, note the bridging paragraph of column 6 and 7. It would be obvious to one of ordinary skill in the art to add the soaking and control cooling steps of the secondary reference to the process of the primary reference as the cooling step because two or more conventional steps to achieve the same cooling steps render the claims obvious.

The references cited but not applied further teach coal products and processes of the same nature as claimed by Applicants.

Any inquiry concerning this communication should be directed to Margaret B. Medley at

telephone number (703) 308-2518.
